”Går det att medvetet planera & boka hållbarare intermodala containerfrakter med hjälp av transparens och fler objektiva val?”

**Our purpose:
Unlocking the full
potential of global
trade.**

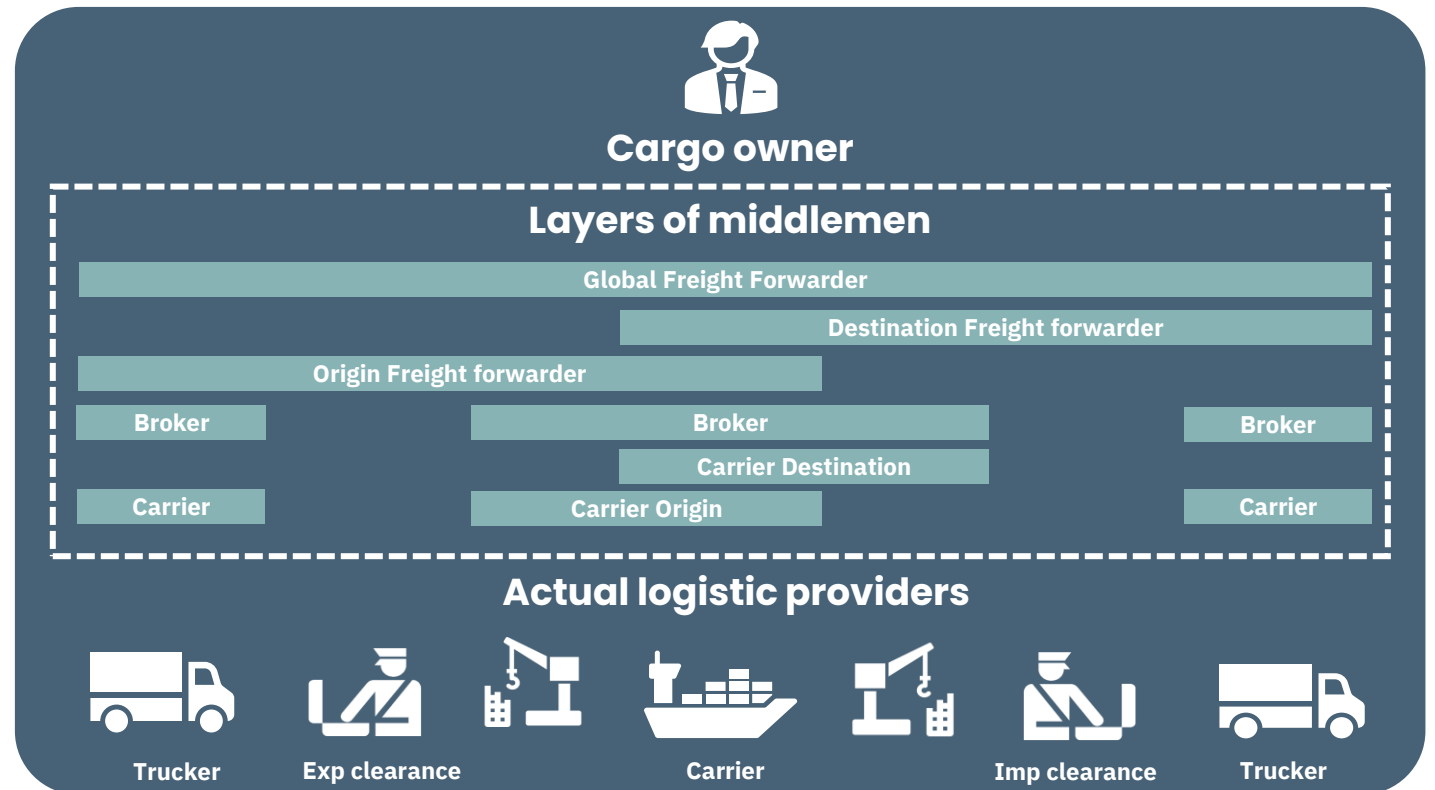

Adnavem is a logistics technology company connecting transport buyers and logistics suppliers through a tech platform, helping clients create bespoke logistics solutions.

Adnavem facilitates international trade and offers both cargo owners and suppliers the benefit of direct engagement, increased control as well as transparent market pricing and service performance.

Customers of Adnavem achieve better supply chain performance at lower cost

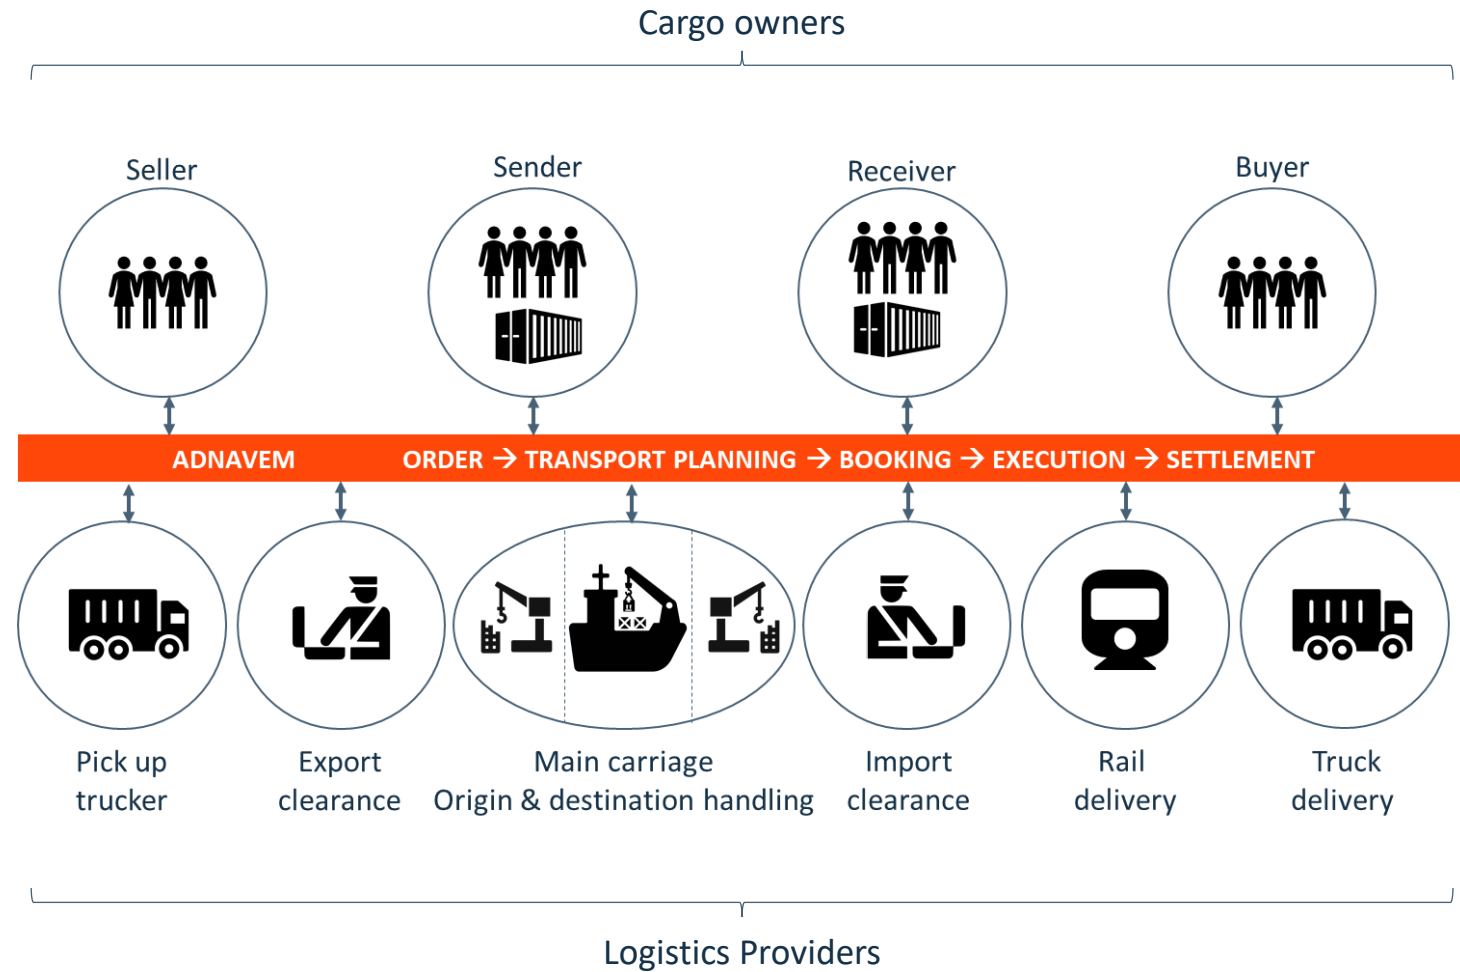

Many layers of trading middlemen make the service performance hard to manage.

- The actual logistics providers, doing the job, are the once managing the service performance
- Many layers of middlemen make the system complex and costly
- Value and margins of trading partners is often not transparent.
- Low flexibility to replace and influence actual logistics providers
- Actual logistic providers are blocked from direct contact with customers

True End-to-End collaboration & visibility

- Enabling effective collaboration in the logistics eco system
- Each party on both sides of a shipment, cargo owners and logistics providers, collaborate with shipment tasks.
- Full efficiency by avoidance of redundant communication
- Each party does their job once – when it should be done!

The Adnavem platform offers four primary solutions:

Marketplace

Connects cargo owners with providers to choose between:

- Lower price
- Faster delivery
- Reliability
- **Most "green" mode of transport**

Control Tower

Real-time visibility and collaboration enables:

- Direct engagement between all parties
- Complete transparency of pricing and performance

Multimodal TMS

Uses analytics and sophisticated algorithms to:

- Plan & manage transports
- Optimise performance
- Lower risk
- Make process faster and better decisions

Order Management

A collaborative order management module to:

- Get full control, down to an item level
- Reduce admin
- Create value for all parties

Enable effective collaboration in the logistics eco system

Solution

Order management

A collaborative order management module to:

- Get full control, down to an item level
- Connect items to container and real time tracking

News Edit

The time is now: implementing a digital supply chain

Digital supply chain management can be an opportunity to save both time and money. It also gives cargo owners a greater sense of control compared to the old way of doing things. Digital supply chain companies collaborate directly with their supply network partners, providing cost transparency and the advantage of seeing exactly where their goods are at any given time.

This shift opens up for optimized planning and possible cost savings – all necessary in a more and more competitive world.

Online Booking

Search for instant rates and sailing schedules online based on your terms & expectations. Find best suited logistics suppliers for your needs – every time.

Please note: Adnavem currently supports shipments between China, Vietnam, Taiwan and Sweden. New markets are continuously added.

Via Adnavem you will find spot prices and, as the market fluctuates, there might not be available prices for searches too far in the future.

Compare different options based on;

- Cost
- Transit time
- CO2 emission

A proactive approach can easily reduce CO2 emissions.
